

# Waste Management Services

## Multi-disciplinary Service

Inland Technologies is a multi-disciplinary environmental services specialist. Inland has been an environmental service provider for over 30 years and in that time has continued to grow and evolve using lessons learned from our past experience, by investing in ongoing innovation, and by being committed to the highest levels of service delivery.

## Core Business

Over the years, Inland's core business focus has evolved to the point where we can say we are broadly experienced. We have designed and built our own hazardous waste management facilities. We have collected and recycled waste oil, managed large waste water treatment lagoons, processed tank sludge, and recycled more glycol than any other company on the planet. We have broadly experienced staff and partners to deliver our programs.

## Our Toolbox

Inland is able to deliver a variety of customized programs because we are skilled in the operation of a number of technologies. Where recycling a material makes economic and environmental sense, we are able to provide a recycling program. Where treatment is the best fit, we are able to manage disposal, anaerobic digestion, or processing via other biological system.

Full Service Waste Management Specialists			
Common waste streams managed	Mechanical treatment technologies	Biological treatment systems	Core work areas
Glycols [1.2 billion litres in the past 12 years]	Ultra-filtration & reverse osmosis systems	Aerated lagoons	Site remediation
Waste oil	Coalescing oil water separators	Engineered wetlands	MEG and glycol recycling
Industrial wastewater	Mechanical vapour recompression [patented equipment]	Anaerobic digesters	Waste oil recycling
Drummed waste	Starcevic Distillation System™	Liaising with public treatment plants	Facility design and development
Lab packs/hazardous waste	Low-temperature thermal desorption	Bio-remediation via composting systems	Environmental compliance/permitting

We are experienced in permit management and often operate under very stringent environmental legislation.

## Integrated Approach

Inland is committed to the delivery of superior customer service. No two clients or project areas have the same requirements. Inland understands this and will develop customized programs to ensure and environmental goals are fully adhered to.

Inland is an experienced project partner. We work with other companies and universities to ensure the delivery of both a strong technical program and outstanding customer service.

## Inland Capabilities & Experience

<b>Current operating sites</b>	17
<b>Years in operation</b>	Over 30
<b>Patents held</b>	Three
<b>Inland Equipment</b>	Dissolved Air Flotation Glyvac™ glycol recovery unit [two patents pending] MEG Concentrator [patented] Starcevic Distillation System™ GlycolGuard™ catch basin insert
